

# KOREAN LANGUAGE STUDIES PLATFORM

Preliminary Software Requirements Specification (SRS) & Proposed Solution

| | |
|---|---|
| Prepared for | Everlove Church |
| Project contact | Joy Jieun Choi — committee leader |
| Prepared by | Eric E. Egan |
| Document version | 0.1 — Draft for Consultation |
| Status | Preliminary; subject to Everlove Church review |

Purpose: support discussion and requirements confirmation. The proposed system is a new build.

## 1. Executive summary & project background

Everlove Church is exploring a convenient way for foreign residents in Korea to apply for Korean-language classes, for organizers to review the information collected, and for learners to be matched with suitable instructors.

The proposed answer is a mobile-friendly web platform centered on a short, progressive application, an administrative work area, and structured human-reviewed instructor matching. It should be designed for practical program administration rather than positioned as a full online learning management system.

## 2. Objectives & anticipated benefits

• Make learner applications accessible online and easier to complete.

• Gather only information that supports class planning, communication and suitable instructor assignments.

• Give authorized organizers a consistent way to review, filter and track submissions.

• Support transparent matching using learner preferences and instructor capabilities, with human confirmation.

• Make future design, implementation scope and operating costs predictable through written requirements decisions.

## 3. Evidence-based requests and interpretation

| Ref | Evidence-based need | Interpretation |
|---|---|---|
| CR-01 | Online learner applications | Digital submission of class interest and relevant details |
| CR-02 | Manage applicant responses | An organizer-controlled view of submitted applications |
| CR-03 | Match learners with suitable instructors | A supported matching and assignment process |
| CR-04 | Review 36-question form | Simplification and mobile-friendly presentation |

| | | |
|---|---|---|
| CR-05 | Advise on requirements and costs | Identify major choices and cost drivers, not an invented quote |

CR = explicit request; AR = analyst recommendation; AV = assumption to verify; FE = possible future enhancement. None of these implies implementation approval.

## 4. Assumptions requiring confirmation

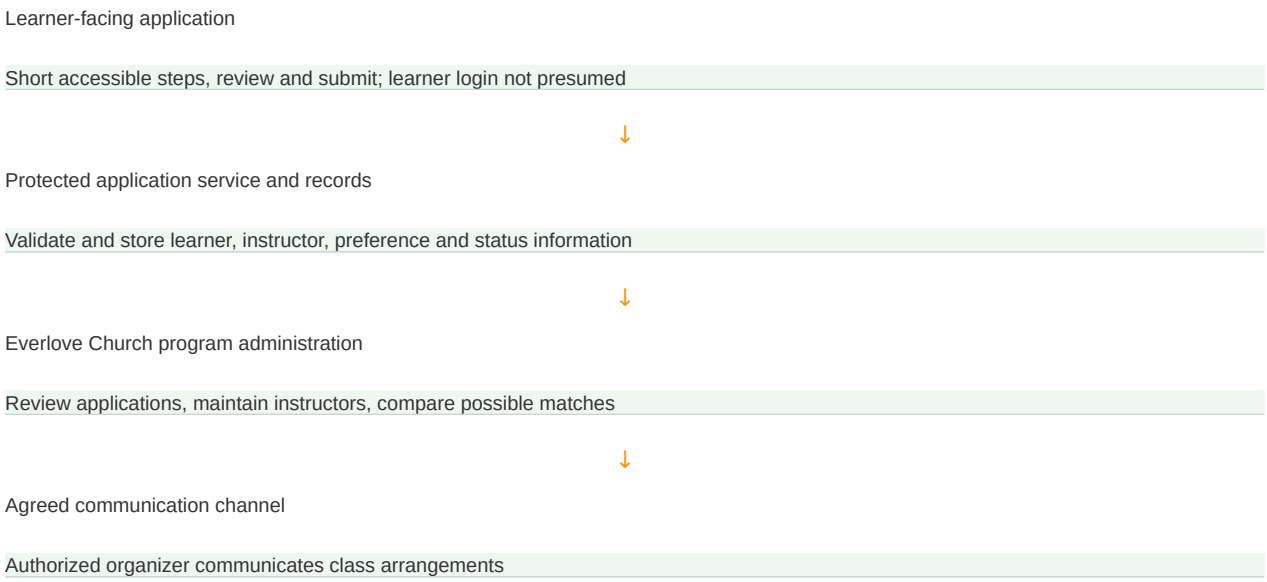

The proposed MVP assumes organizers can manage learner applications and instructor records; that an administrator makes the final instructor assignment; and that a basic web-based platform is appropriate.

Each assumption requires confirmation before design is baselined.

## 5. Proposed system overview

A new Korean Language Studies Platform, with a mobile-friendly application form, protected applicant records, organizer administration and human-reviewed instructor matching.

### Conceptual system architecture (AR)

## 6. Proposed roles and permissions

| Role | Recommended access | Status |
|---|---|---|
| Learner | Create and submit own application; optionally receive submission confirmation | AR |
| Program administrator | View authorized applications; manage instructor profiles; make final matches; control application status | AR |
| Instructor | Supply availability, teaching topics and capabilities via organizer entry or a limited form | AR |
| System operator | Maintain service configurations and permitted access; no routine educational decision-making | AR / AV |

Privacy rule: Instructors should not automatically gain access to full learner records. Share only details necessary for a confirmed class arrangement, subject to the program organizer’s privacy arrangements.

## 7. Functional requirements — draft

| ID | Requirement / expected behavior | Priority | Status |
|---|---|---|---|

| | | | |
|---|---|---|---|
| FR-01 | Learner can complete and submit a mobile-responsive online application. | Must | CR / AR |
| FR-02 | Form groups questions into short steps with clear progress and validation. | Must | AR |
| FR-03 | Show conditional questions only when relevant to prior answers. | Should | AR |
| FR-04 | Organizer can view, search and filter submitted applications. | Must | CR / AR |
| FR-05 | Organizer can update an application’s review/assignment status. | Must | AR |
| FR-06 | Organizer can create and edit instructor capability and availability records. | Must | AR |
| FR-07 | System supports candidate matching by language level, goals, format, schedule and location where relevant. | Must | CR / AR |
| FR-08 | Organizer reviews options and records the final assignment. | Must | AR |
| FR-09 | Provide authorized access and a traceable record of key administrative changes. | Must | AR |
| FR-10 | Store consent status and approved notice version or equivalent processing record. | Must | AR |
| FR-11 | Display clear submission outcome; confirm communication arrangements with organizer. | Must | AR |
| FR-12 | Support exports or basic activity summary for authorized staff. | Could | AR |
| FR-13 | Optional instructor self-service and automatic notifications. | Could | FE |

## 8. Proposed learner application structure

The original application comprises 36 items in eight sections. A proposed five-step digital experience retains information needed for registration and matching while minimizing unnecessary repetition. Detailed question-by-question recommendations can be reviewed separately during consultation.

| Step | Learner sees | Representative source questions |
|---|---|---|
| 1. About you | Name and contact; only other demographic items if justified | Q1–5, Q35 |
| 2. Korean level and goals | Proficiency, learning needs, main class interests | Q6–14 |
| **Step** | **Learner sees** | **Representative source questions** |
| 3. Learning preferences | Instruction language, learning approach and class/group preference | Q15–20 |
| 4. Format and availability | In-person/online choice, location if applicable, scheduling preferences | Q21–29 |
| 5. Review and submit | Essential final comments, notice and appropriate consent choice | Q30–36 |

Recommended usability principles: grouped questions; selective defaults; optional free text; one clear contact field; conditional class-format questions; accessible controls; confirmation before submission; and no promotional or unrelated personal-data collection by default.

## 9. Application and administration workflow (AR)

Learner completes application

Select language level, goals, class preferences, availability and contact

↓

Privacy notice and submission

Review information, accept applicable notice/consent process and submit

↓

Organizer reviews application

Check details, identify missing information or clarifications

↓

Organizer identifies instructor options

Review relevant teaching capabilities and overlapping availability

↓

Organizer confirms and communicates match

Record agreed assignment and inform participants via approved channel

Exception paths: incomplete submissions need follow-up; no suitable instructor means pending/waiting list; applicant withdrawal should trigger appropriate record handling. The exact status names and authority remain to be confirmed.

## 10. Learner–instructor matching

| Information compared | Illustrative matching rule | Decision owner |
|---|---|---|
| Korean level | Instructor can teach learner's current level | Organizer |
| Learning aim / subject | Instructor offers relevant topic or instruction style | Organizer |
| Availability | At least one practical common class window | Organizer |
| Format / geography | In-person area or online teaching ability fits | Organizer |
| Instruction language / class size | Support and group preference reasonably fit | Organizer |

This is a transparent shortlist approach, not guaranteed automatic placement. No artificial intelligence is needed. Confirm whether the organizer prefers manual filters, rule-based candidate suggestions or both.

## 11. Nonfunctional requirements

| ID | Proposed requirement | Acceptance direction |
|---|---|---|
| NFR-01 Security | Encrypted transport; authenticated organizer access; least-privilege records; security review before release. | No unauthorized applicant data exposure |
| NFR-02 Privacy | Collect minimal data; published notice; lawful handling of consent/other basis; retention and deletion process. | Organizer approves final notice and retention rules |
| NFR-03 Accessibility | Keyboard-accessible forms, visible labels/errors, adequate text contrast. | Test agreed accessibility target |
| NFR-04 Usability | Clear progress, readable questions, low-friction phone entry, understandable errors. | Review prototype with representative learners |
| NFR-05; Responsive | Works on recent phone, tablet and desktop browsers. | Cross-device QA |
| NFR-06 Reliability | Durable submission records, recovery/backup approach and error handling. | Agree service and recovery targets |
| NFR-07; Maintainability | Modular components, documented configuration, separate nonproduction test environment. | Handover and maintenance plan |
| NFR-08 Language | Determine English/Korean interface copy and administrative | Approved language scope |

| |
|---|
| language. |

## 12. Proposed MVP and scope exclusions

| Proposed first-release scope (AR) | Not included unless separately agreed (FE) |
|---|---|
| Responsive application form and validation | AI-generated matching or automated educational decisions |
| Basic organizer access and review dashboard | Payment gateway, subscriptions or invoicing |
| Instructor record maintenance and manual/assisted matching | Built-in live video lessons or conferencing |
| Status tracking and submission acknowledgement | Full LMS, grading, tests or learning analytics |
| Baseline privacy controls and audit record | Complex attendance tracking, certificates, marketplace functions |

## 13. Technical approach and integrations

The project starts with a new web application and secure backend with role-based administrative access and managed data storage. Appropriate implementation options may include conventional web hosting or managed cloud services. A vendor, framework, cloud region, authentication provider and database should be chosen only after service expectations and budget are confirmed.

Initial integration needs have not been established. Email, SMS, KakaoTalk notifications, institutional identity integration and external scheduling are options to assess, not baseline requirements. The proposal does not depend on any existing platform.

**Cost considerations.** Any indicative development or operating costs, if applicable, will be provided in a separate document after Everlove Church has reviewed and provided feedback on this preliminary SRS. No cost estimate or implementation approval is implied by this draft.
